Q21. Valid Parentheses

Problem List

Code

Java Auto

```java
class Solution {
    public boolean isValid(String s) {
        Stack<Character> st = new Stack<>();

        for(int i = 0; i < s.length(); i++) {
            char ch = s.charAt(i);

            if(ch == '(' || ch == '[' || ch == '{') {
                st.push(ch);
            }
            else {
                if(st.isEmpty()) {
                    return false;
                }

                if(ch == ')' && st.peek() == '(') {
                    st.pop();
                }
                else if(ch == ']' && st.peek() == '[') {
                    st.pop();
                }
                else if(ch == '}' && st.peek() == '{') {
                    st.pop();
                }
                else {
                    return false;
                }
            }
        }

        return st.isEmpty();
    }
}
```

Q22. Min Stack

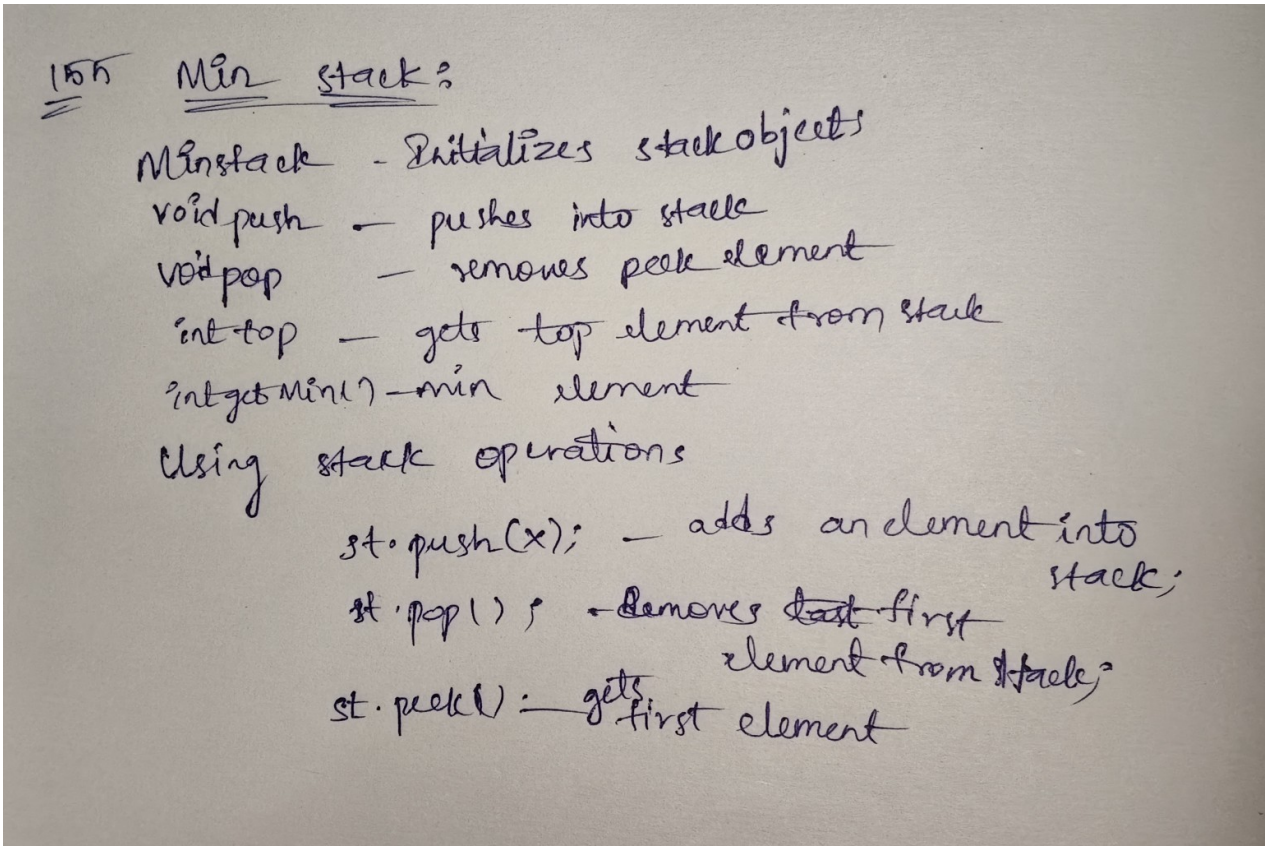

Problem List

Code

Java Auto

```java
class MinStack {
    Stack<Integer> st = new Stack<>();
    Stack<Integer> min = new Stack<>();
    public MinStack() {
    }
    public void push(int val) {
        st.push(val);
        if(min.isEmpty() || val <= min.peek()) {
            min.push(val);
        }
    }
    public void pop() {
        int x = st.pop();

        if(x == min.peek()) {
            min.pop();
        }
    }
    public int top() {
        return st.peek();
    }
    public int getMin() {
        return min.peek();
    }
}
```

Q23. Next Greater Element I

Problem List

Submit

Code

Java

Auto

```java
class Solution {
    public int[] nextGreaterElement(int[] nums1, int[] nums2) {
        int ans[] = new int[nums1.length];

        for(int i = 0; i < nums1.length; i++) {
            ans[i] = -1;

            for(int j = 0; j < nums2.length; j++) {
                if(nums1[i] == nums2[j]) {

                    for(int k = j + 1; k < nums2.length; k++) {
                        if(nums2[k] > nums2[j]) {
                            ans[i] = nums2[k];
                            break;
                        }
                    }
                    break;
                }
            }
        }

        return ans;
    }
}
```

Q24. Evaluate Reverse Polish Notation

Problem List | Submit

Code

Java | Auto

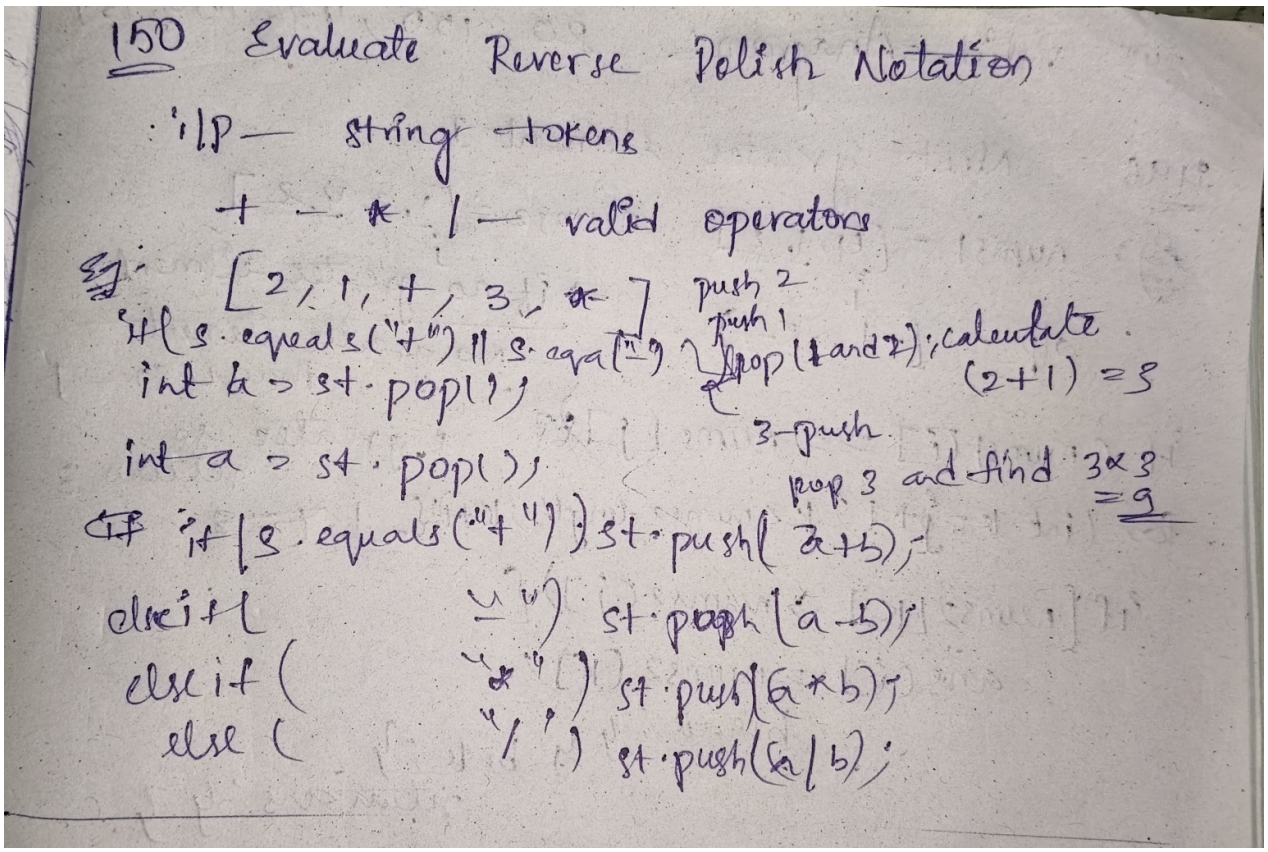

```java
class Solution {
    public int evalRPN(String[] tokens) {
        Stack<Integer> st = new Stack<>();

        for(int i = 0; i < tokens.length; i++) {
            String s = tokens[i];

            if(s.equals("+") || s.equals("-") || s.equals("*") || s.equals("/")) {
                int b = st.pop();
                int a = st.pop();

                if(s.equals("+")) st.push(a + b);
                else if(s.equals("-")) st.push(a - b);
                else if(s.equals("*")) st.push(a * b);
                else if(s.equals("/")) st.push(a / b);
            }
            else {
                st.push(Integer.parseInt(s));
            }
        }

        return st.pop();
    }
```

Q25. Daily Temperatures

Problem List

Submit

Code

va Auto

```java
class Solution {
    public int[] dailyTemperatures(int[] arr) {

        int n = arr.length;
        int i = n - 1;

        Stack<Integer> st = new Stack<>();
        int ans[] = new int[n];

        while(i >= 0) {

            if(st.isEmpty()) {
                ans[i] = 0;
                st.push(i);
                i--;
            }
            else if(arr[i] < arr[st.peek()]) {
                ans[i] = st.peek() - i;
                st.push(i);
                i--;
            }
            else {
                st.pop();
            }
        }

        return ans;
```
